

Book Review

10 Mindframes for Visible Learning:

Teaching for success

Author: John Hattie and Klaus Zierer

Publisher: Routledge, 2018

This is John Hattie's latest work. He has written about mindframes before (see Visible Learning for Teachers) and this book brings together his previous meta-analyses and focuses on the critical area that makes the most difference to student success: the mindframes of the educators.

Each chapter begins with a questionnaire for self-reflection and includes recommendations for action, sample problems, checklists, exercises, evidence-based knowledge and suggestions for further reading. In that sense it really is a workbook for teachers to examine their attitudes, develop their skills and advance their own educational expertise.

Highly recommended for teachers wishing to really understand and improve the impact they have on outcomes for students.
